

# Disambiguation of Possessives: The Extended Generative Lexicon

Possession is one of the basic concepts in human society, and there is hardly a language without possessive expressions. We start with the English possessive ``s and the preposition ``of, the Spanish and French ``de, the Chinese ``de and the Japanese ``no. Possessive expressions are ambiguous. For example, ``Marys book can mean the book that Mary owns or the book that Mary wrote. The purpose of this book is to provide means for possessive disambiguation, and to enable the interpretation of the semantic relations between the possessor and the possessee. The Generative Lexicon Theory (GL), which has been considered to be a powerful tool for disambiguation of possessives, is found to be insufficient for Japanese possessives such as ``boshi-no hito (the hat lady). Therefore, this book modifies GL and supplement lexical semantic information with another submodule. The Extended GL, what I call, provides means to predict the maximum possible kinds of relations between ``hat and ``the lady.
